# **CLICK-IT**: How do clinicians like and understand trustworthy guidelines?

- Randomized survey of physicians using clickers in educational sessions -

### AIMS

To determine physicians' understanding, attitudes and preferences about trustworthy guidelines displayed in traditional or new presentation formats developed in DECIDE.

### **METHODS**

We collected answers from physicians using clickers during a standardized sessions with 3 components:

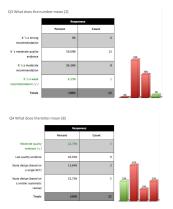

- 1. A clinical scenario
- 2. A current trustworthy recommendation relevant to the scenario
  - displayed in both traditional formats and new DECIDE formats
  - clinicians were randomized by order of presentation format
  - understanding, anticipated actions and preference were assessed
- 3. Key concepts regarding trustworthy guidelines (e.g. GRADE).
  - understanding and preferences were assessed

- Systematic review
- 3. EBM textbook (e.g. UpToDate)
- 4. Practice guideline (national or international)5. Ask a collegation
- 6. Individe

Participants were randomized to order of presentation, by being blinded during parts of the session

## PRELIMINARY RESULTS (n=129 physicians)

- Clinicians reported that both recommendations, formats and supporting information were useful.
- They preferred the new DECIDE formats.

### Rut

- Low awareness of standards for trustworthy guidelines
- Some confusion regarding the strength of recommendation and confidence in effect-estimates, and implications for decision-making.

# **NEXT STEPS (2014-2015)**

- From these first results we have made a new round of CLICK-IT -sessions and sequential ones are planned
- The DECIDE formats have been implemented in guideline authoring and publication tools from DECIDE and MAGIC, and are currently used in several published guidelines
- Use and impact in real clinical settings will be followed closely
